Support: Specifications

The FleetPC-13 provides a wide selection of Intel® Core™ processors ranging from i9 14900T to i3 14100T, all integrated with the Intel® UHD 700 series graphics, poised to offer a viable solution to significantly reduce response time for computation-intensive AI tasks at different scales.

Beyond handling instant visual data analytics and facilitating decision-making processes, the AI-fueled computer is prepared to fulfill the advanced demands for elevating creativity and efficiency to the next level by offering an alternative to dedicated GPUs such as NVIDIA RTXTM and Intel® ArcTM graphics, geared up with a much more powerful engine for ultra high-performance computing capabilities to tackle extremely complex calculation and massive amounts of data for edge AI inferencing directly at local devices, without the need for transmitting data back and forth between cloud servers and edge systems.
